VSHARK
ENGINEERING SOLUTIONS

We capture reality. Then we engineer it.

VShark Solutions provides state-of-the-art 3D scanning and 3D design services for businesses and individuals. We capture parts, products and spaces as accurate digital data — then engineer that data into editable CAD, flawless surfaces, BIM models, inspection reports, prototypes and photoreal visuals. One partner, from the physical object to the finished digital deliverable and back again.

0.02 mm
SCAN ACCURACY

7
CORE SERVICES

6
INDUSTRIES SERVED

6+
COUNTRIES WITH REPEAT CLIENTS

01 Our services

Use one on its own, or hand us the whole job.

01 3D Scanning
Capture any part, product or space as an accurate digital model.
Point cloud (.PLY, .TXT) · Mesh (.STL, .OBJ) · Colour/texture scans

03 Scan to BIM
Existing buildings captured as accurate, intelligent BIM models.
Registered point cloud (.E57, .RCP) · Revit model (.RVT) · IFC export

05 Digital Metrology
Compare manufactured parts to their CAD — to the micron.
Inspection report (.PDF) · Colour deviation maps · GD&T results tables

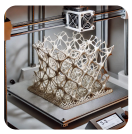

07 Product Rendering
Photoreal visuals that sell a product before it is ever made.
High-res stills (.PNG, .TIFF) · Animations (.MP4) · 360° turntables

02 Reverse Engineering
Turn scan data into fully editable, manufacturable CAD.
Parametric CAD (.STEP, .IGES, .X_T) · Native SolidWorks / Creo / NX · 2D drawings (.PDF, .DWG)

04 Class A Surfacing
Flawless, curvature-continuous surfaces for visible parts.
Class A surfaces (.IGES, .STEP) · Native Alias / ICEM models · Surface-analysis reports

06 3D Printing
Rapid prototypes and functional parts, straight from your model.
Printed parts · Print-ready files (.STL, .3MF) · Finishing / painting on request

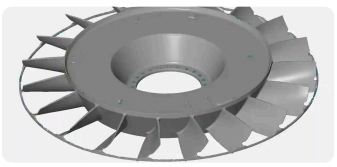

End-to-end, one partner
Scan, engineer, inspect, print and render under one roof — with one point of contact.

02 How we work

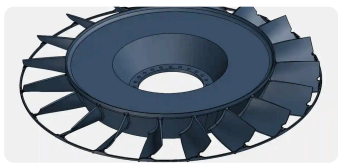

Scan to solution in four steps.

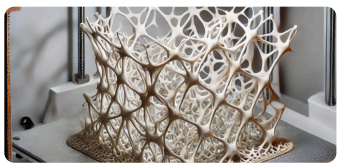

STEP 01
Capture
We scan the part, product or site — in our lab or on location.

STEP 02
Process
Scans are aligned, cleaned and merged into usable, watertight data.

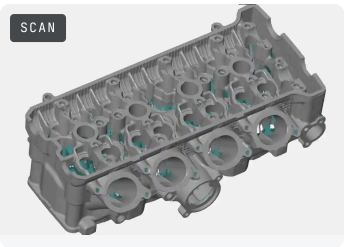

STEP 03
Engineer
CAD, Class A surfaces, BIM or inspection built from that data.

STEP 04
Deliver
Native files, drawings and reports in the formats your team uses.

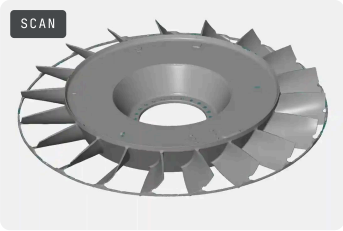

03 Scan in. CAD out.

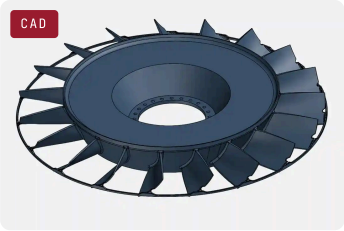

Real parts captured and rebuilt as editable CAD.

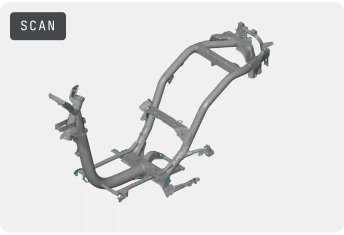

Cylinder Head Engine cylinder head scanned and rebuilt as parametric CAD.

Impeller Bladed impeller captured and modelled with precise freeform blade surfaces.

Bike Frame Motorcycle frame digitised and converted into an editable CAD assembly.

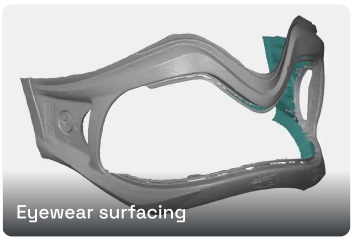

Bumper Vehicle bumper scanned and resurfaced for tooling.

04 Design & visualisation

Surfacing, sculpting and photoreal rendering.

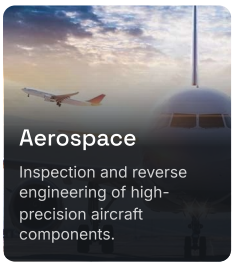

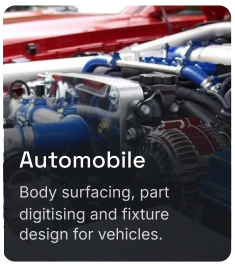

05 Industries we serve

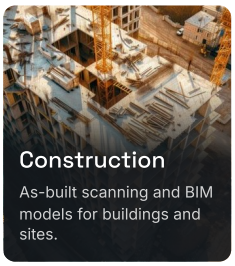

Six sectors, one standard of precision.

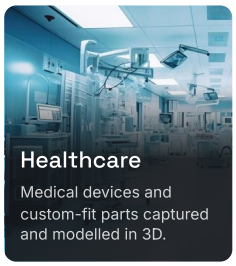

Aerospace
Inspection and reverse engineering of high-precision aircraft components.

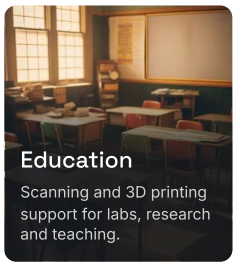

Automobile
Body surfacing, part digitising and fixture design for vehicles.

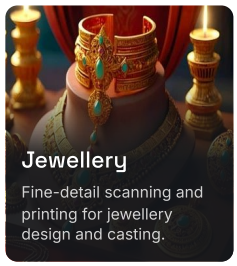

Construction
As-built scanning and BIM models for buildings and sites.

Healthcare
Medical devices and custom-fit parts captured and modelled in 3D.

Education
Scanning and 3D printing support for labs, research and teaching.

Jewellery
Fine-detail scanning and printing for jewellery design and casting.

06 3D scanners

Vertex3D
Handheld blue-laser 3D scanner
0.020 mm precision

Vertex3D Pro
Handheld blue-laser 3D scanner
0.020 mm precision

Vertex Tracker
Optical-tracking 3D scanning system
0.025 mm precision

07 What clients say

> "VShark Solutions was able to take a relatively poorly scanned object and convert it to a solid model with very accurate dimensions. Their surfacing skills are amazing, and the accuracy is perfect for our needs."
>
> **Rachel Labonte** CANADA

> "Working with VSHARK on a reverse engineering and 3D modelling project was impressive; their professionalism, clear communication, and dedication to quality made the entire process smooth and efficient."
>
> **Benedikt Klein** GERMANY
